epati

SSL Certificate Configuration for Clients

Product: Antikor v2 - Next Generation Firewall Configuration Examples

www.epati.com.tr

Summary

Encrypts the data flow between the server and the client. The server notifies the browser that there is an SSL session and sends the required certificate information for HTTPS sites.

Network Topology

On the side of Windows

1. Right-click on the certificate file and select "Install Certificate."

2. Select "Open" of the security warning.

Do you want to open this file?

Always ask before opening this file
While files from the Internet can be useful, this file type can potentially harm your computer. If you do not trust the source, do not open this software. What's the risk?
3. Choose Current User or Local Machine.
×
Certificate Import Wizard
Welcome to the Certificate Import Wizard
This wizard helps you copy certificates, certificate trust lists, and certificate revocation lists from your disk to a certificate store.
A certificate, which is issued by a certification authority, is a confirmation of your identity and contains information used to protect data or to establish secure network connections. A certificate store is the system area where certificates are kept.

To continue, click Next.
Sector Cancel

After, Click "Yes" (Do you want to allow thiss app to make cahanges to your device?)

4. Select "Place all certificates in the following store", then click Trusted Root Certification Authorities from the browse menu.

Certificate Store

Certificate stores are system areas where certificates are kept.

Windows can automatically select a certificate store, or you can specify a location for the certificate.

~

Х

 \bigcirc Automatically select the certificate store based on the type of certificate

Place all certificates in the following store

Certificate store:

Trusted Root Certification Authorities	Browse
