## Alcatel Dual Layer Configuration

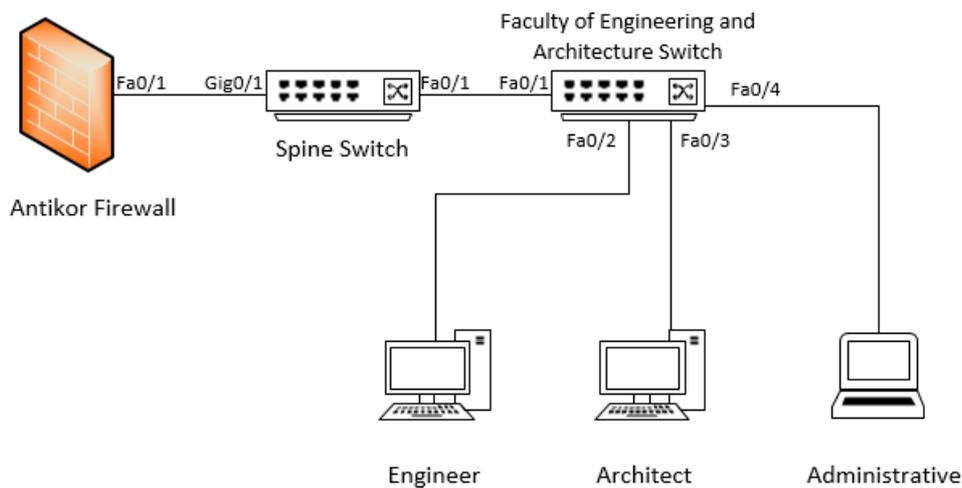

Product: Antikor v2 - Next Generation Firewall  
Configuration Examples

# Alcatel Dual Layer Configuration

## Summary

Dual Layer Networking prepared to ensure LAN's traffic flow among themselves without reaching Antikor v2. If any client which in a LAN wants to reach an external address, it shall get service from Antikor v2 otherwise it wants to reach an internal but different LAN, it will suffice to get service from backbone switch.

## Network Topology

## Configuration

The configurations these are required for the backbone switch shown below:

### Spine Switch

```

## Testing

From pc2 to pc0 tracert image;

```
Packet Tracer PC Command Line 1.0
PC>ipconfig

FastEthernet0 Connection: (default port)

Link-local IPv6 Address.....: FE80::201:43FF:FE47:A1B7
IP Address.....: 10.33.102.3
Subnet Mask.....: 255.255.255.0
Default Gateway.....: 10.33.102.1

PC>tracert 10.33.100.3

Tracing route to 10.33.100.3 over a maximum of 30 hops:

  0  0 ms    0 ms    0 ms    10.33.102.1
  1  *      0 ms    0 ms    10.33.100.3

Trace complete.

PC>
```

When we run traceroute from PC 2 to PC 0, we saw that the traffic did not go as far as Antikor v2 and turn around to right destination Network from Backbone Switch.

Please follow [Antikor v2 Dual Layer Configurations Manual](#) for required settings on the Antikor v2 side.

## Troubleshooting

Runing Command	Error Message	Solution Suggestion
ping 10.2.1.2	— Ping statistics for 10.0.0.1 — 5 packets transmitted, 0 packets received, 100.0% packet loss	Check the status of the ports.
		Review VLAN settings.
