Network Definitions

Product: Antikor v2 - Next Generation Firewall
Guides

Network Definitions

This is the section where the network definitions are located. In this section, you can create network groups and define an IP address, network, IP address range, or FQDN for these groups. These definitions can also be used in security rules, access permissions, and the private users section. To add a network group, the desired IP Address(es)/Network(s) can be defined according to the content type to be created from the **Network Definitions - New Registration** window that will appear after clicking the **Add** button.
