## IPS Profile

Product: Antikor v2 - Next Generation Firewall  
Guides

IPS Profile

IPS is intrusion detection and prevention system. It examines the packets passing through internet traffic and can detect and block traffic that is associated with their signatures. Click here for detailed information about IPS signatures.

BROWSER-CHROME Google Chrome blink webaudio module use after free attempt

Class Type: attempted-user

CVE: CVE-2019-13720

Flow: to\_server

Signature Status: default-enabled

Category: browser-chrome

Platform: Linux

Policy: balanced-ips-drop

Policy: connectivity-ips-drop

Policy: max-detect-ips-drop

Policy: security-ips-drop

Severity: high

Block

Field	Description
Class Type	IPS signatures are divided into 29 different class types and can be filtered and selected according to the class type.
Signature Status	Default active or passive signatures can be filtered.
Platform	IPS signatures of 11 different platforms can be filtered.
Signature Display	Enabled and Disabled signatures can be filtered. If the signature is selected, the selected signatures can be filtered with the <i>Enable</i> option.
CVE	<a href="#">CVE (Common Vulnerabilities and Exposures)</a> , It is a vulnerability dictionary available to the public and can be filtered with CVE codes and precautions can be taken.
Category	It is categorized according to the properties of IPS signatures such as domain and can be filtered among these categories.
Policy	Security, such as the most detected, policy information can be filtered.
Flow	Wherever the flow direction will be; to_server or to_client is selected.
MS Vulnerability	It can be filtered to prevent vulnerabilities caused by “ <i>MS code</i> ”.
Severity	IPS signatures can be filtered as high, medium and low severity.

Clicking the “User Defined Signatures” button, which is determined by the red field in the image below, details of signatures and signature “Actions” can be specified.
