The manager is responsible for the accuracy of the system's date configuration. It is recommended to use an NTP server in order to ensure synchronization of the date time configuration.

NTP Settings

NTP (Network Time Protocol - Network Time Protocol) ensures that the time and date settings of the network are automatically removed from the specified server. The clock and date setting will be stamp for logs collected.

In order to adjust the NTP, we must be activated by clicking the automatic buy button and we need to specify the time period of the country of our country from the field of time zones. Then click the Add button on the top right, NTP servers should be added and click the Update button. NTP servers can be listed. NTP has a synchronization frequency for synchronization.
