# Access without NAT

Product: Antikor v2 - Next Generation Firewall
Configuration Examples

Access without NAT

Servers are given a real IP address. In this case, if the port is not open to the DMZ Access control, all ports become open, when a port is added only the open ports become active and others become closed.

Network Topology

Configuration

Firstly, click DMZ Server Management under the DMZ Management menu.

In DMZ Server Management page, new register can be created or can arranged.

If ports are added to accesses, all ports on this server will be open for access.
